<u>Mr. Daniel Rodríguez, principal investigator at InnovatiST</u>

Mr. Rodriguez is a Computer Science engineer, with a specialization in Software Engineering, having graduated in the Computer Science Engineering Faculty of the Pontifical University of Salamanca.

He has also taken courses in English (Advanced Level Business English, Operational English), IT Governance: ITIL, COBIT, CMMI, course on Project Management by the Madrid Chamber of Commerce, and Occupational Risk Prevention course.

He has a strong technical background as he started his career working as programmer and analyst. These areas of expertise include advanced knowledge of C, C ++, Java (J2SE, J2EE, J2ME), ASP.NET, ADA, XML, CGI. He has worked with several development environments like Visual Studio, Forte for Java, Fast Objects, Sun One Mobile Edition, Eclipse… as well as other tools such as Together, Visible Analyst, Rational Rose, and Easy Case.

He has participated in the development of Java applications for mobile terminals and of client-server applications, as well as of systems to manage advanced information on the different parts of a project. He was involved in Analyst-work, as design architect and systems analysis, in the development of java oriented mobile terminals and information client-server applications. As analyst/architect, he has done design and analysis tasks of mobile Java systems oriented to both terminals and information client-server applications.

In the management area, he is in charge of reporting to the Manager about the progress of the projects, cost control, forecasting resources and development of risk management plans. He has coordinated and led advocacy actions of the activities of the company in many international projects belonging to both the European framework program and to mixed funding programs under organizations such as ITEA and CELTIC.
He has also wide experience as a European project manager and coordinator, having coordinated different projects in the fields of security, mobile interfaces and communications since November 2004. He has coordinated at the European level work packages within projects financed under the financing tool Integrated Projects (IP).

Mr. Rodriguez is leading the technical department of the company carrying out the management of the R&D, commercial and public procurement projects, as well Innovati lines of business.
