Water JPI  
WaterWorks2014 Cofunded Call  
18 May 2016, Rome

# CONSORTIUM DESCRIPTION

| ACRONYM   | TOPIC        | Coordination   | Partners  |
|---|--------------|--|---|
| <b>MUFFIN</b>   | <b>2 ; 3</b> |                 |    |
| <b>Multi-Scale Urban Flood Forecasting: from local tailored systems to a pan-European service</b> |              | <b>urban flooding; multi-scale forecasting; intense rainfall; end-user value; European service</b> |   |

| PRINCIPAL INVESTIGATOR | INSTITUTION                                      | COUNTRY         |
|------------------------|--|-----------------|
| Jonas Olsson           | Swedish Meterological and Hydrological Institute | Sweden          |
| Søren Thorndahl        | Aalborg University                               | Denmark         |
| Herman Russchenberg    | Delft University of Technology                   | The Netherlands |
| Teemu Kokkonen         | Aalto and Helsinki University                    | Finland         |

# The problem

- ❖ Urban flooding is a problem already today
- ❖ Urban population is rapidly growing worldwide (2 → 4 billion in ~30 years; UN)
- ❖ This generally increases both main types of flood risk
  - *Pluvial flooding (intense rainfall)* – because of densification of central parts
  - *Fluvial flooding (river discharge)* – because of city expanding to flood-prone areas
- ❖ Further more intense rainfall is expected in a warmer climate
- ❖ **The urban flooding hazard is expected to increase**

# The solution

## Long-term planning

design (and re-design) cities in a resilient way

## Short-term preparedness

develop tools for early warning and emergency support

Sustainable and flood-resilient cities

M  
U  
F  
F  
I  
N

# Flood models: state-of-the-art

## *Local hydraulic models*

- ❖ Primarily designed for pluvial flooding in highly urbanized areas
- ❖ Describes coupled flows on surface and in sewers
- ❖ Temporal resolution down to seconds and spatial resolution down to metres
- ❖ Set-up and execution requires substantial resources for every area

## *Multi-basin hydrologic models*

- ❖ Primarily designed for fluvial (i.e. river) flooding in rural areas
- ❖ Describes infiltration and river discharge
- ❖ Temporal resolution generally 1 day and spatial resolution ~ 1 km
- ❖ Can be set up and executed over large regions with limited resources

# MUFFIN: objectives and originality

---

**The overall objectives of the project is to**

- ❖ Explore today's performance limits of both types of modelling/forecasting approaches
- ❖ Assess the value of forecast resolution and accuracy for a selection of key end-users
- ❖ Bridge the gap between the urban and large-scale hydrological modelling communities, for providing mutual benefits and an arena for new thinking

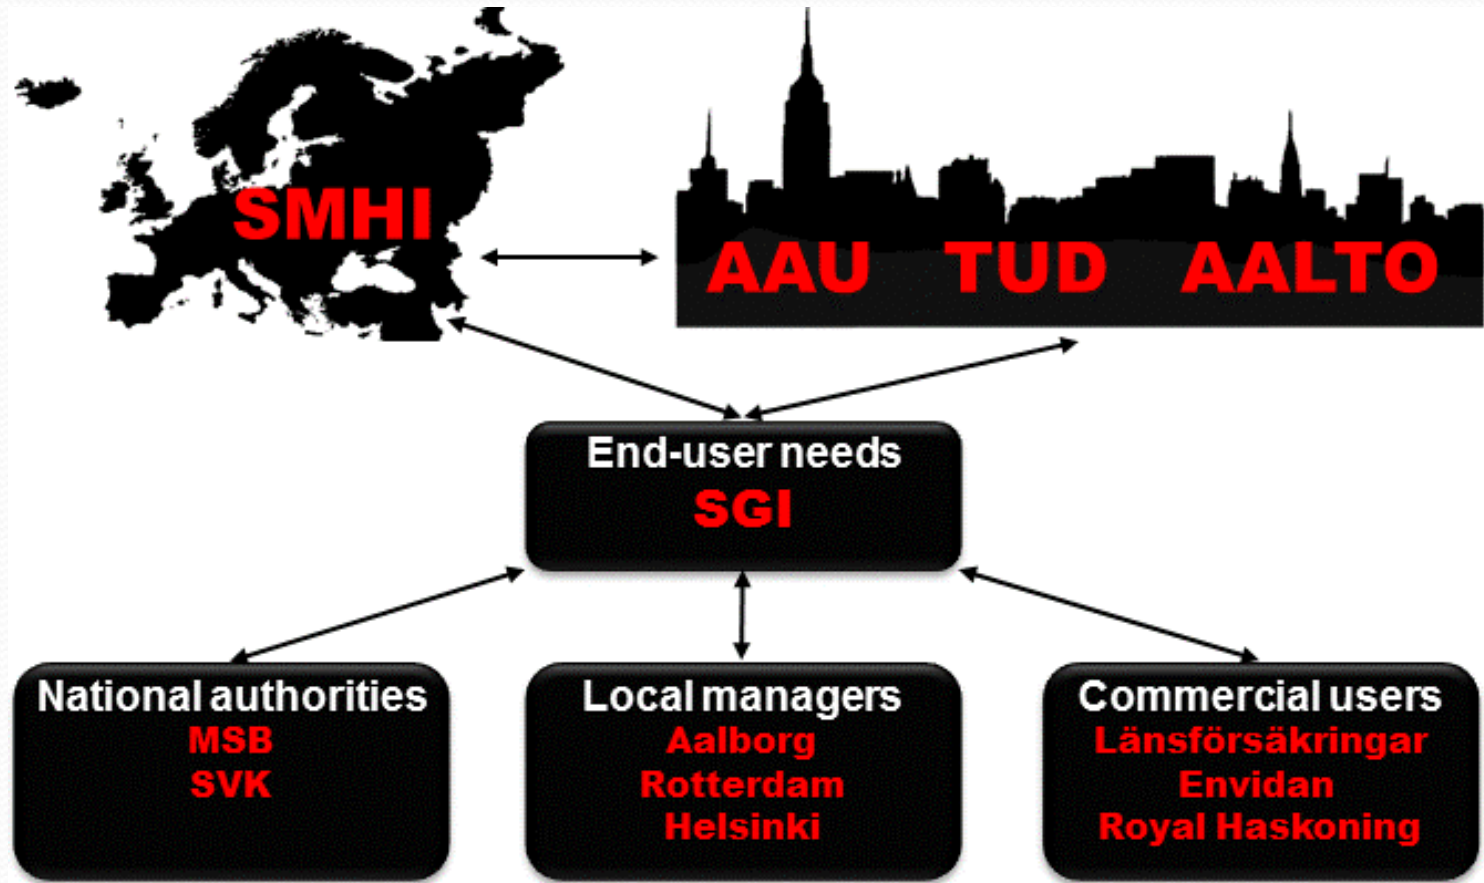

# MUFFIN: relation to call

---

The proposal specifically addresses the third topic of the call, i.e. *Research and Innovation for Developing Technological Solutions and Services to Mitigate Impacts of Extreme Events (Floods and Droughts) at Catchment Scale*, including all three sub-topics:

- ❖ *Innovative tools for protection*: The project includes application and development of new sensors, monitoring systems and methodologies to observe and predict extreme rainfall
- ❖ *Mitigating harmful impacts*: The flood models will support analysis and evaluation of Sustainable Urban Drainage Systems (SUDS) such as green roofs, swales and infiltration systems
- ❖ *Risk management solutions*: The ultimate aim is improved tools, products and procedures for early warning of urban flooding using different systems in different environments and at different scales

# MUFFIN: consortium connections

# MUFFIN: work packages

## WPI MANAGEMENT

Task 1.1 Management and coordination

Task 1.2 Advisory Board

# MUFFIN: work packages

## WP2 END-USER VALUE

Task 2.1 Inventory and requirement specification

Task 2.2 GIS analysis and application

Task 2.3 Meeting, reporting and post-project planning

# MUFFIN: work packages

## WP3 HYDRO-METEOROLOGICAL DATA

Task 3.1 Precipitation observations

Task 3.2 Observations of other variables

Task 3.3 Meteorological forecasts and nowcasts

Task 3.4 Data quality, synchronization and exchange

# MUFFIN: work packages

## WP4 URBAN FLOOD FORECASTING

Task 4.1 Urban catchment characterization

Task 4.2 Local model development

Task 4.3 Multi-basin model development

Task 4.4 Multi-scale experiments

Task 4.5 Analysis and synthesis

Task 4.6 Interpretation and presentation

# MUFFIN: work packages

## WP5 EXPLOITATION AND DISSEMINATION

Task 5.1 Exploitation

Task 5.2 Dissemination

# MUFFIN: the overall picture

Table 3: List of milestones and deliverables.

| Milestones (month/s):   | Deliverables (month/s):  |
|---|--|
| M1.1 AB meetings (3,18,34)                                      | D1.1 Final report, including post-project plan (36)                      |
| M2.1 End-user workshops/meetings (3,18,34)                      | D2.1 End-user Requirement Specification (4)                              |
| M2.2 End-user survey completed                                  | D2.2 GIS application (36)  |
| M3.1 Forecasting/nowcasting methodology (12)                    | D2.3 End-user Report (part of final report) (36)                         |
| M4.1 Land-use data retrieved and flood models developed (10)    | D3.1 Observational data for flood model development and calibration (12) |
| M4.2 Flood models set-up, events selected (18)                  | D3.2 Meteorological hindcasts for flood model simulations (18)           |
| M4.3 Historical hindcasts performed (22)                        | D3.3 Report on hydro-meteorological forcing in the project (21)          |
| M4.4 Real-time demonstration runs completed (28)                | D3.4 Final observational data bases (36)                                 |
| M4.5 Analysis and interpretation done (30)                      | D4.1 Report of flood model development in the project (16)               |
| M5.1 Web-site constructed, updates + newsletter (3 + 9, 21, 33) | D4.2 Report of the results from the multi-scale experiments (30)         |
|   | D4.3 Material for end-user feedback (33)                                 |
|   | D5.1 Pre-operational systems (36)  |

Table 4: Gantt chart giving the overview of project activities.

| WP | Task | Activity                     | 2016 |      |      | 2017 |    |    |      | 2018 |    |    |      | 2019 |      |
|----|------|------------------------------|------|------|------|------|----|----|------|------|----|----|------|------|------|
|    |      |                              | Q2   | Q3   | Q4   | Q1   | Q2 | Q3 | Q4   | Q1   | Q2 | Q3 | Q4   | Q1   |      |
| 1  | 1.1  | Management and coordination  |      |      |      |      |    |    |      |      |    |    |      |      | D1.1 |
|    | 1.2  | Advisory board meetings      | M1.1 |      |      |      |    |    | M1.1 |      |    |    |      |      | M1.1 |
| 2  | 2.1  | Inventory and requirements   |      |      |      | M2.2 |    |    |      |      |    |    |      |      |      |
|    | 2.2  | GIS application              |      |      |      |      |    |    |      |      |    |    |      |      | D2.2 |
|    | 2.3  | Meeting, reporting, planning | M2.1 | D2.1 |      |      |    |    | M2.1 |      |    |    |      |      | D2.3 |
| 3  | 3.1  | Precipitation observations   |      |      |      | D3.1 |    |    |      |      |    |    |      |      | D3.4 |
|    | 3.2  | Other observations           |      |      |      | D3.1 |    |    |      |      |    |    |      |      | D3.4 |
|    | 3.3  | Forecasts and nowcasts       |      |      |      | M3.1 |    |    | D3.2 |      |    |    |      |      |      |
|    | 3.4  | Data management, exchange    |      |      |      |      |    |    |      | D3.3 |    |    |      |      |      |
| 4  | 4.1  | Catchment characterization   |      |      |      |      |    |    | M4.2 |      |    |    |      |      |      |
|    | 4.2  | Local model set-up           |      |      |      | M4.1 |    |    | M4.2 |      |    |    |      |      |      |
|    | 4.3  | HYPE model set-up            |      |      |      | M4.1 |    |    | M4.2 |      |    |    |      |      |      |
|    | 4.4  | Multi-scale experiments      |      |      |      |      |    |    |      | M4.3 |    |    | M4.4 |      |      |
|    | 4.5  | Analysis and synthesis       |      |      |      |      |    |    |      |      |    |    | M4.5 |      |      |
|    | 4.6  | Interpretation, presentation |      |      |      |      |    |    | D4.1 |      |    |    | D4.2 | D4.3 |      |
| 5  | 5.1  | Exploitation                 |      |      |      |      |    |    |      |      |    |    |      |      | D5.1 |
|    | 5.2  | Dissemination                | M5.1 |      | M5.1 |      |    |    |      | M5.1 |    |    |      |      | M5.1 |

# MUFFIN: outcome and impacts

---

## The main expected outputs

- ❖ Local and Pan-European urban flood forecasting systems with quantified performance/accuracy
- ❖ Data bases with high-resolution hydro-meteorological data from the case cities
- ❖ Scientific publications and scientific conference contributions
- ❖ End-user outreach: open workshops and tailored reports, as well as GIS visualization tool for end-users
- ❖ Short-term exchange of researchers and students between the consortium partners will be aimed at through coupled projects and activities
