

# AQUATAP-ES TAP Workshop 3

## Part 2

“Developing Approaches for Assessing and Optimising the Value of Ecosystem Services”

José María Bodoque del Pozo

Virtual meeting  
8<sup>th</sup> October 2020

# Water JPI

## AQUATAP-ES Midterm deliverables

### Aims of the workshop José María Bodoque del Pozo (AQUATAP-ES Coordinator)

Present the results we have obtained about what the **key data** to characterize/value ecosystem services should be. Discuss their interest to be presented at the **ESP conference**, as well as from them draft a paper to be submitted to the **special issue** planned at the ESP conference, or to a QI journal.

Discuss if the proposed **skeleton paper** is appropriate enough to be potentially published in the planned special issue of the ESP conference or in a QI journal.

Present the **draft model catalogue** for the characterization/valuation of ecosystem services. Discuss if its design is appropriate, if all **water-related ecosystem services** are collected, what the criteria for model selection should be, or if further explanatory attributes should be added to the models.

Present the final version of the **policy brief** on the integration of the ecosystem services approach into policy and practice.

Discuss what the structure of the **decision support guidance/brief document (tools)** should be. Among others, the issues to be considered are: i) what content the guidelines should include; ii) Do we have ongoing examples of best practices?; iii) who should be the end users of the decision support tools? and iv) what are the next steps to be taken?

To inform about the **next steps** to be developed in the framework of the  
AQUATAP-EN network
